

CPCCE3015A - REMOVE FRIABLE ASBESTOS

Course Description

This unit specifies the outcomes required to remove friable asbestos containing material (ACM). The unit includes preparing, enclosing and removing friable ACM, and includes knowledge of decontamination and disposal requirements. Satisfactory completion of this unit will enable the student to apply for a Class A licence for asbestos removal work.

Please note this course does not entitle an individual to hold a statutory asbestos removal contractor license. You must make further inquiries to the relevant state or territory WHS regulator to determine contractor licensing requirements. This course is a mandatory training requirement for operatives of licensed friable asbestos removal activities.

Contents

- Prepare for asbestos removal.
- Prepare removal area and site.
- Site isolation
- Select appropriate plant, tools and equipment
- Remove asbestos from site in accordance with Asbestos Removal Control Plans regulatory requirements
- Carry out decontamination process for workers and equipment in accordance with regulatory requirements and codes of practice
- Clear work area & dispose, reuse or recycle materials in accordance with regulatory requirements and codes of practice
- Documentation requirements.

Entry Requirements

Students must have completed:

- CPCCWHS1001 – Prepare to Work safely in the construction industry.

RPL

Do you already have many of the skills that are being taught in this course? Transform Training recognises existing skills and prior learning through our Recognised Prior Learning (RPL) Program, because there is no need to learn what you already know. Talk to our staff about RPL today.

Delivery & Assessment

Training and assessment is conducted on site and is structured on a flexible basis to meet the needs of the organisation and students and includes classroom theory and practical on-job training. Assessment is competency based and will include a mixture of classroom based exercises and practical demonstration of skills.

Pathways

Successful assessment outcomes from this training will result in a Statement of Attainment; that may be used for recognition in a relevant qualification. This course is also the requirement for obtaining a Class A licence for asbestos removal.

Materials and Equipment

Students will be provided with all written and physical materials required to complete the assessment. Students must wear long trousers, a long sleeve top and steel-capped boots.

More Info

Students should also refer to the Student information booklet and fee schedules for detailed information on Transform Training's policies and procedures including:

- Work, health and safety
- Fees and charges
- Refunds
- Grievances and disputes
